

FEWD Week #6 Project: Forms

Description

This week, you'll be practicing your form skills: you have the option of adding a form to your final project, finishing the Relaxr form that will be started in class, or building a form for CitiPix. The form you build must include at least three different types of HTML form elements and some light CSS styling. We have given you an example of a form that renders well on the web and mobile devices, as well as an example, with starter code, of a registration form you could build for Relaxr.

Use at least three
different types of
HTML5 form
elements: `input`,
`textarea`,

select , radio

button ,

dropdown ,

checkbox

Link to your sign-up
page from different
pages in your
application

Style forms lightly
using CSS

Make sure a user's
password is not
visible when they
are entering it
